

HANDS-ON TRAINING

DR MAURIZIO MARTINI, ITALY

7CE
Credits

Post-extractive implant placement & immediate loading

 **DATE:**
04 JUNE 2027
09:00 - 18:00

 **LOCATION:**
CAPP Training Institute
Dubai | UAE

 **TARGET AUDIENCE:**
General Dentistry,
Implant Dentistry

Abstract

Implantology with immediate loading protocol has become a part of our daily practice, either for the effectiveness or the pressing demands of our patients.

Being able to handle the immediate loading in every aspect is mandatory for us, especially if we want to be successful and continuously up to date.

We are going to describe the scientific background of the procedures and the possibility of using the immediate implant for the replacement of a hopeless tooth, especially in the esthetic area.

Immediate implant placement has many advantages, such as fewer surgical procedures, decreased treatment time and faster patient results. However, unpredictable soft- and hard-tissue outcome is a problem. This course aims to improve the soft-tissue aesthetic outcome of single implants placed in fresh extraction sockets.

Learning Objectives & Outcomes

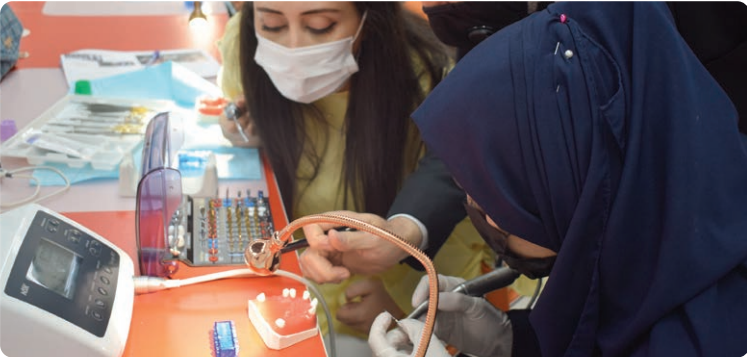

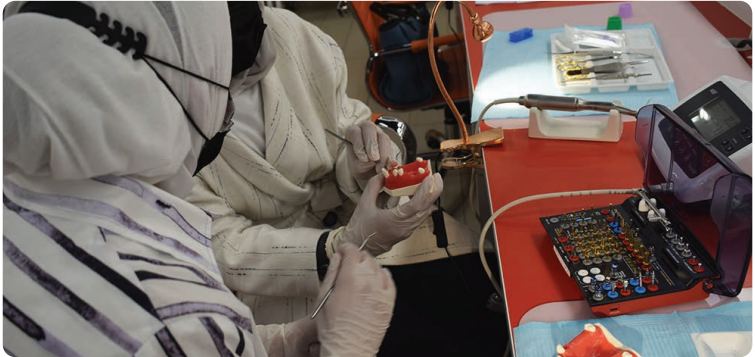

- Discuss case selection for post-extractive immediate loading according to the indication of the literature.
- Describe extraction techniques and drilling protocol in the post-extractive implant: Incisors, premolars and molars.
- Explain how to approach the extraction to prevent any damage to the buccal bone?
- Explain how to manage complications like poor primary stability, buccal fenestration, and dehiscence
- Discuss how to preserve or gain keratinised mucosa around the implant to provide better biological and aesthetic long-term results?
- How to manage the temporary and the final crown in order to achieve the best aesthetic outcome?
- How to improve the aesthetic outcome: from extraction, soft tissue management and final crown.

REGISTRATION & PRICING

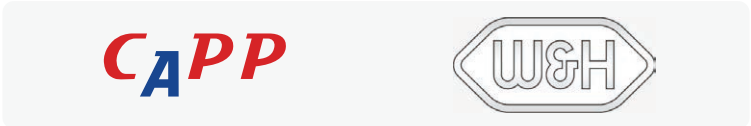

Agenda

09:00 – 10:00	Lecture: Scientific background of immediate implant & immediate loading
10:00 – 11:00	Lecture: Immediate implant in the front teeth: why and how to do it
11:00 – 11:15	Coffee Break
11:15 – 12:30	Lecture: Immediate implants on the premolars: Tips and Tricks
12:30 – 13:30	Lunch
13:30 – 14:30	Lecture: Immediate Implant in the molars
14:30 – 15:30	Hands-on: Extraction techniques and drilling protocol in the post-extractive implant: Incisors & premolars
15:30 – 15:45	Coffee Break
15:45 – 16:30	Hands-on: Extraction techniques and drilling protocol in the post-extractive implant: Molars
16:30 – 17:30	Hands-on: Preparation of the temporary abutment and delivery of the temporary crowns
