

Coronally advanced flap for managing single tooth recession

HANDS-ON TRAINING

Dr Chew Ren Jie Jacob, Singapore

7CE
Credits

 **DATE:**
13 Nov 2025
09:00 – 18:00

 **LOCATION:**
CAPP Training Institute
Dubai | UAE

 **TARGET AUDIENCE:**
General Dentistry, Periodontics

Abstract

Gingival recessions are very common, resulting in suboptimal aesthetics. Over the years, many different surgical techniques have been proposed to correct these recession defects and improve the periodontal phenotype. Regardless of the surgical technique, several fundamental skill sets will be required. These skills can be best explored and mastered with the coronally advanced flap used for managing single tooth recessions.

Learning Objectives

- Diagnosis and surgical risk assessment for recession defects.
- Surgical preparation of the coronally advanced flap for single tooth recession coverage.
- Different techniques for harvesting connective tissue grafts from the palate.
- Securing the connective tissue graft or soft tissue substitutes.
- Achieve tension-free coronal flap advancement and closure.

Registration & Pricing

Agenda

09:00 – 09:30	Gingival recession aetiology and classification
09:30 – 10:30	Case selection and risk assessment
10:30 – 10:45	Coffee Break
10:45 – 11:30	Coronally advanced flap: surgical principles
11:30 – 12:15	Connective tissue harvesting: possible sites and considerations
12:15 – 13:15	Lunch
13:15 – 14:00	Demo + hands-on Impact of flap design on coronal advancement
14:00 – 15:00	Demo + hands-on 2 techniques for autogenous tissue harvesting from the palate
15:00 – 17:00	Demo + hands-on Coronally advanced flap for single tooth recession
